[Citrus schools earn B grade on standardized tests](#)

(Citrus County Chronicle © 01/05/2012)

INVERNESS All three Citrus County public high schools had enough points to earn an A grade last year, but none of them did. That's because other criteria, outside standardized test scores and routine graduation rates, were also used in determining high school grades and that criteria cost each school. Each school ended up with a B.&r...

[State Ed Watch Blog: States Expected to Focus on 3rd-Grade Retention](#)

(Education Week © 01/05/2012)

Elected officials in a couple of states are expected to take on one of the trickiest issues affecting elementary schools: how high to set the bar for allowing students to move between grades 3 and 4. Governors in Iowa and New Mexico have proposed setting a reading skill level for students to advance beyond 3rd grade, an idea they hope their legislatures will take up as they convene this winter....

[Teacher Beat: New Data on Teacher Education Begins to Flow](#)

(Education Week © 01/05/2012)

There's a ton of new data on the state of teacher education beginning to come out, and it's ripe for analysis, if and it's a big if you know where to look. The 2008 rewrite of the Higher Education Act changed many of the reporting requirements for teacher colleges, which are housed in Title II of that law. (See the embedded sidebar in this story for a summary of those changes.) Now, those...

Our Opinion: Earning good grades

Schools improve; so must lawmakers

Parents of children in Leon County's public schools should feel pretty good about the quality of education their children are receiving, based on the much-anticipated release of high-school grades Wednesday by the state.

Those attending Chiles and SAIL high schools get an extra pat on the back for earning A grades this year. Other grades include: Godby, C; Leon, B; Lincoln, B; and Rickards, B.

Statewide result show that high schools overall improved their grades, with 78 percent earning an A or B this year, compared with 71 percent last year.

School grades are important beyond bragging rights. New residents often make their decision on where to live based on grades of schools in certain neighborhoods. Also, schools earning an A grade and those improving from the previous year are awarded special bonus money that can help offset the fact that many of their teachers have gone years without substantial raises.

In Wakulla County, Superintendent David Miller said Wakulla High School met most of the criteria to earn an A, but fell short by a slim margin based on the graduation rates of at-risk students. Barely missing the A grade cost the school between \$85,000 and \$90,000 in bonus money.

State records indicate that, of the 170 high schools dropping from an A grade to B last year, 53 did so because they didn't meet the standard for improving the number of at-risk graduates.

High-school grades are based 50 percent on FCAT scores, with other measurements such as graduation rates, Advanced Placement scores, SAT scores and the school's graduation rate of at-risk students factored in.

This is an example of the complicated set of standards that principals and classroom teachers work under, while facing threats to their job security and pay.

"I think it's really sad when you're hoping on a star to get that bonus money," Superintendent Miller said. "Teachers haven't had a raise in four of five years, but at the same time they have to pay 3 percent toward their retirement fund."

In his response to the grade release, Gov. Rick Scott said, "It is great to see more of Florida's high schools trending upward. Education is critical to improving lives, preparing students for a job and attracting employers."

Now it is important that Gov. Scott and the Legislature earn an A on their own report cards when it comes to properly funding public education as they begin the legislative session Tuesday. Mr. Scott, in releasing his \$66.4 billion budget plan late last year, added \$1 billion to education spending. This was met with cautious applause by school superintendents and educators, who saw more than \$ 1 billion cut from the education budget in the previous year.

The message to Mr. Scott and legislators should be that educators in Leon, Wakulla and surrounding counties continue to make progress in helping our students learn, despite working with fewer dollars.

If the state is serious about producing a more educated workforce, money for public education must be protected from the political shenanigans and misguided priorities that have resulted in drastic cuts and forced layoffs and even school closings in some districts.

Otherwise, state leaders will send a very bad message to educators and employers, and they can expect very poor grades from voters

Washington Post Class Struggle Blog

Stunningly reasonable achievement gap approach

By Jay Mathews

You cannot understand modern education policy without a grasp of the achievement gap. On average, low-income students have lower academic achievement than affluent students. Black or Hispanic students similarly score lower on standardized tests, on average, than white or Asian students.

School leaders say they want to reduce those gaps but are uncertain about how to do it. They should read a new book by Arlington County educators who mounted one of the most sustained assaults on the achievement gap ever seen in this area.

The book is *Gaining on the Gap: Changing Hearts, Minds, and Practice*, by Robert G. Smith, Alvin L. Crawley, Cheryl Robinson, Timothy Cotman Jr., Marty Swaim and Palma Strand. The main man is Smith, the Arlington school superintendent from 1997 to 2009.

When Smith took over Arlington schools, I thought he was headed for an embarrassing failure. He said he intended to do everything possible to reduce the achievement gap and report his progress every year, letting his reputation rise or fall on the results. I wrote that he was taking a big risk. Reducing the gap was too difficult to make it the prime issue.

He did it anyway and made me look bad:

From 1998 to 2009, the portion of black students passing Virginia Standards of Learning tests in Arlington rose from 37 to 77 percent. For Hispanic students, the jump was from 47 to 84 percent. The gap between non-Hispanic white and black passing rates dropped from 45 percentage points to 19. Between Hispanics and non-Hispanic whites, the gap shrank from 35 points to 12.

The power of the book is not so much in the numbers but how Smith and his well-chosen team of administrators and teachers did this. They made sure all staff knew how kids at all levels were doing and how important it was that they improve. There were startling differences between what Smith asked them to do and what the federal No Child Left Behind law mandated for all districts in the country.

Smith went far beyond the laws focus on reading and math scores in grades three through eight and in high school. He insisted on measuring each major ethnic group, plus low-income students, students with disabilities and students learning English, on: the percentage passing first-year algebra with a C or better by the end of eighth grade; the percentage enrolled and passing advanced courses in grades six through 12; the percentage completing the third year of a foreign language by the end of grade 11; the percentage of sixth- through eighth-graders taking electives in art, music and theater; the percentage meeting or exceeding criterion levels on the Virginia Wellness-Related Fitness Tests; and several other measures.

No Child Left Behind put all districts on an improvement schedule that made few adjustments to reality. If a school had a bad year, it acquired an unattractive label and had to get moving or risk more sanctions. Smith, on the other hand, required detailed reporting of results at all levels, but then, he says in the book, the emphasis shifted from results to recommended revisions to goals, objectives, indicators, or targets, depending on the results achieved. For example, if targets had been exceeded in the previous year and targets previously set for the next year had also been surpassed, the targets would be revised upward. In other instances, the data may have gone in the opposite direction, occasioning a need to adjust targets downward to keep their achievement within the realm of the possible.

How shockingly reasonable. Smith didnt insist, as the federal government did, that all schools strive toward 100 percent proficiency by 2014. He just wanted them

to improve. I think there are problems with measuring schools by these gaps, but Smith and his splendid team produced a better school system.

That is worth copying if Congress ever gets around to replacing No Child Left Behind.

High school grades released

Chiles, SAIL each earn an A

By Ashley Ames

High school grades for the 2010-2011 school year were released Wednesday, almost a month later than grades were released a year ago.

Leon County's Chiles and SAIL high schools led public schools in the area both made an A, and SAIL increased from last year's grade of a B but the remainder of the high schools in Leon, Wakulla, Jefferson and Gadsden counties maintained or dropped their school grade. Florida A&M University Developmental Research School maintained a C grade, Florida State University School maintained an A grade.

In Gadsden County, West Gadsden High School received a final grade of a C and East Gadsden High School received an F grade, down from a D in the 2009-2010 school year.

Statewide, 78 percent of high schools in Florida scored an A or a B, an increase from last year's 71 percent, according to the Florida Department of Education.

The 2010-2011 school year marks the second that a new calculation has been used to determine high school grades. The calculation takes into account FCAT scores but also looks at non-FCAT components such as graduation rates, performance and participation in programs like AP and IB and college readiness in reading and math, explained Paul Felsch, director of testing, research and evaluation for Leon County Schools. And while sometimes a school can have enough points to receive an A grade, if it doesn't meet certain criteria like at-risk student graduation rates or FCAT achievement in certain areas it may not be eligible to receive an A.

While there were no schools that scored below a C in Leon County, Godby dropped from a B to a C and both Lincoln and Rickards dropped from an A to a B. Five out of the six schools had enough points to receive an A, Felsch said. Felsch explained that for the 2009-2010 school grade, when Godby jumped from an F to a B school, it received a substantial number of points for growth in achievement.

"Last year, Godby scores came way up, so they got what you could call bonus points," he said.

This year, he said, the school didn't get nearly as many.

Godby Principal Gillian Gregory said that if the growth points had been there again this year, the school would have a comfortable B.

"We performed very close to what the B is, and improved," she said, adding that she was optimistic about the direction in which the school was heading. "But because we didn't get the growth points, we didn't score a B this year."

Leon County Superintendent Jackie Pons said that with 83 percent of the high schools in the county receiving an A or a B, he was proud of the district's achievement.

"It is a positive day," said Pons, adding that the district was one of only 10 statewide to earn an A for nine years in a row. "We still have room for improvement; we will continue to work on that."

East Gadsden Principal Kimball Thomas said that he knew there was a possibility of a low score when he was hired in July. He said that by this time next year, when the structure he put in place in August has taken hold, he wants to see no lower than a C.

"We don't like the idea that last year's grade was an F," he said. "We are here to change that scenario."

Thomas said that this was not the grade that reflected the work in the school this year, and he was aiming for an A.

"What we put in place we are implementing with fidelity," he said. "There is an absolutely wonderful change in the culture on this campus. The teachers and students know that the bar has been set high."

In Wakulla County, the high school received a B, the same grade as last year. Wakulla Superintendent David Miller said that while the school had enough points for an A grade, the percent of at-risk students who graduated did not show enough of an increase from last year. That number needed to go from 62 percent to 67 percent, and only increased to 64 percent.

"We were 2.58 kids in that cohort group at risk group that did not graduate. If they had graduated, the school would have gotten its rightful score," said Miller. "I think it is ridiculous that you penalize an entire school for the performance of two kids."

The West, Jefferson County Middle/High School received a D, the same grade it received in the 2009-2010 school year. Superintendent Bill Brumfield could not be reached for comment Wednesday.

South Florida Schools

Tuition lawsuit appeal filed in Supreme Court

By Scott Travis

The question of whose job it is to set university tuition has been debated for much of the past decade, and it isn't over yet.

A group including former U.S. Sen. Bob Graham is asking the State Supreme Court to rule on the issue, according to the Fort Myers News Press. ([link to story](#))

Graham's group contends it's the responsibility not of the Legislature, but of the Board of Governors, a body created in 2002 through a state referendum. But the District Court of Appeal sided with legislative leaders in October.

"The (Supreme) Court's acceptance of this case will end the confusion and uncertainty surrounding the responsibility for hundreds of millions of dollars generated by the universities from payments made by student families in exchange for instruction and services at the campus level," the News Press quotes the brief as saying.

But the issue of tuition has gotten a lot trickier since the lawsuit was first filed in 2007. Since then, the Legislature has given all 11 public universities the authority to set differential tuition, which is an amount above the state-set tuition. For most Florida families, the fast rising differential tuition has been an issue of more concern than who sets the base tuition. It's unclear whether any action from the Florida Supreme Court might affect differential tuition.
